	Pin diameter	ft-in (mm)	0'3" {80}	0'4" {90}	0'4" {100}
Working hydraulic pressure	psi (MPa)	4,970 {34.3}	4,550 {31.4}	4,260 {29.4}	

Note: Units follow the International System of Units (SI).

STANDARD EQUIPMENT

Note: Standard and optional equipment may vary. Consult your KOBELCO dealer for specifics.

ENGINE

SK350DLC / SK400DLC

- HINO J08EVV Tier IV final diesel engine with turbocharger and intercooler
- Batteries (2 x 12V - 96Ah)

SK550DLC

- HINO P11C-VN Tier IV final diesel engine with turbocharger and intercooler
- Batteries (2 x 12V - 176Ah)

COMMON FEATURERS

- Automatic engine deceleration
- Auto Idle Stop (AIS)
- Double element air cleaner
- Removable clean - out screen
- Starting motor (24V - 5 kW), 60 amp alternator
- Engine oil pan drain valve
- Side by side oil, hydraulic and engine radiators

CONTROL

- Working mode selector (H-mode, S-mode and ECO-mode)
- Power Boost (for use with separate boom specification)

HYDRAULIC

- Auto warm-up system
- Hydraulic oil cooler
- Hydraulic oil filter maintenance indicator
- Rotation and N&B auxiliary circuits and piping

SWING SYSTEM & TRAVEL SYSTEM

- Swing rebound prevention system
- Two-speed travel with automatic down shift
- Sealed & lubricated track links
- 800mm shoes (SK350DLC) / 600mm shoes (SK400DLC and SK550DLC)
- Grease-type track adjusters
- Automatic swing brake
- Hydraulic adjustable track frame (SK400DLC and SK550DLC)

MIRRORS, LIGHTS & CAMERAS

- Two rearview mirrors
- Rear-view camera
- Right side camera, additional monitor
- Three front working lights (1 on upper carriage, 2 on cab)
- Attachment front work light (separate boom: 2, ultra long attachment: 2)
- Swing flashers with 2 rear working lights
- Cab lower light
- Cab lower mirror

OPTIONAL EQUIPMENT

- Stand for 3.5m (2.4m) insert and 3.5m adapter
- Full track guides
- Extended guard rail (SK350DLC / SK400DLC)
- 700mm, 600mm shoes for SK350DLC
- Hydraulic oil for cold climates

Note: This document may contain attachments and optional equipment that are not available in your area. It may also contain photographs of machines with specifications that differ from those sold in your area. Please contact your nearest KOBELCO dealer for items you require. Due to our policy of continuous product improvement, all designs and specifications are subject to change without advance notice. Regulations

SK350D_{LC} SK400D_{LC} SK550D_{LC}

Designed and built to save time and get you up and working!!

The KOBELCO demolition machine utilizes a common use type base boom and exclusive NEXT attachment joint for the Ultra long front, boom insert and the Separate boom.

KOBELCO's demolition machines with the exclusive NEXT joint systems are made so you can set up or change work fronts quick and easy to get the job done. With the ability to change tools on site and work at multiple heights with a single machine, the productivity is maximized with the needs of the job.

Due to the unique structure of this attachment, transport can be completed safely and with just a few steps. Add that to the excellent fuel savings and machine durability, KOBELCO helps provide the owner reduced operational costs, less downtime and greater return on investment.

KOBELCO's SK350DLC, SK400DLC, SK550DLC demolition machines are the next generation of high performance and cutting edge technology. They are ready to go to work for you.

Focus on operation rate resulting in a machine with common use type base boom

Previous demolition machines had a structure that basically did not allow machine front to be exchanged, meaning one complete machine was required for each specification. Having machines each dedicated to its specialty was useful onsite, but this meant that the operation rate was low and users were required to own multiple machines. KOBELCO's solution was to develop a machine structure that enabled one machine to be adapted to multiple specifications. Our solution took form in the shape of a machine with common use type base boom.

The NEXT system, created with focus on the site

A machine with common use type base boom can be easily transported by separating the main body and its attachments, requiring less time for set-up after arriving onsite. KOBELCO studied in detail how the assembly work could be completed safely in a short time. We threw out the previous fixed concepts about attachments and developed an innovative attachment that incorporated our various ideas, resulting in the NEXT system. This also allows for faster changes between the high reach and separate boom fronts.

3 base machine sizes
total of 8 different configurations

SK 350 D_{LC}

SK 400 D_{LC}

SK 550 D_{LC}

Work setups done quickly and safely! The new-generation NEXT demolition attachment

NEXT attachment

The new-generation NEXT demolition attachment for the demolition machine with common use type base boom was designed by KOBELCO without being limited by existing concepts. Each boom attachment has a block structure that simplifies assembly/disassembly and transport, and the attachments employ our original NEXT joint system. The steps for attachment assembly/disassembly from pressure release to pin fixing can be completed safely in a short time.

■ NEXT joint system

KOBELCO's original joint system was developed by testing the assembly/disassembly process extensively. The boom attachment can be connected just by hooking the upper (backside) pin and fixing with the separate opposing pins on the lower side (bottom side).

■ Side-mounted hydraulic piping

All attachment joints have the hydraulic piping mounted on the side, adopting hydraulic quick coupler system for connecting sections.

Piping connection: Hydraulic quick coupler system on the side of the boom.

SK400DLC
Separate boom specification

Attachments and base machine designed for easy truck transport.

Attachment height during transport [NEXT ultra long attachment specification]

The 3-piece NEXT ultra long attachment is designed with the jib cylinder and arm cylinder crossed over the short inter arm, and the back of the arm is flat. The height while in the stored state has been lessened to approx. 7'3" (2,200mm) to lower the entire height during transport.

Hydraulic crawler extension/retraction mechanism

[on SK400DLC and SK550DLC]

Crawlers can be retracted to reduce crawler width to below 9'9" (2,980mm) for ease of transport. The hydraulic system makes light work of extending or retracting with crawler shoes remaining on ground.

Two-part counterweight

[on SK400DLC and SK550DLC]

The counterweight can be separated into two for transport. One part forms a case into which the other part is housed. It looks neat and uncluttered, and assembly/disassembly is faster than with an integrated counterweight, also gives more versatility for transportation.

Boom attachments can be changed easily, enabling a high machine operation rate

Ultra long attachment specification

The ultra long attachment enables demolition work at high places to be performed from the ground. The maximum work height is at the top level for this class, and this machine can be used for the demolition of common buildings up to nine stories high. The length can be shortened by removing the boom insert if maximum height is not required.

Maximum work height

	20'0" (6.1m) arm	28'6" (8.7m) arm
SK550D.LC	Approx. 82'0" (25.0m)	Approx. 90'3" (27.5m)
SK400D.LC	Approx. 69'3" (21.1m)	Approx. 81'0" (24.7m)
SK350D.LC	Approx. 68'11" (21.0m)	—

Note: The measurement is for the arm bucket pin position.

Separate boom specification

The separate boom specification has a wide working range, making work at lower elevations and below ground level easy. The impressive maximum work depth exceeds 20', and a large diameter jib cylinder is attached to the boom bottom side to ensure substantial lifting power. This specification is suitable for demolition of the lower floors, underground floors, and foundations of buildings.

Working range

	Maximum work depth	Maximum work height
SK550D.LC	20'6" (6.26m)	47'12" (14.62m)
SK400D.LC	20'4" (6.21m)	44'11" (13.68m)
SK350D.LC	20'9" (6.32m)	44'6" (13.57m)

Note: The measurement is for the arm bucket pin position.

Large front attachment

A 2.6 or 3 ton class large tool can be attached to the ultra long attachment specification. Powerful crushing can be performed at high floor levels for more efficient work progress. The separate boom specification can handle 4 to 5.3 ton class tools.

Tool limit weight

	Ultra long attachment specification		Separate boom specification
	20'0" (6.1m) arm	28'6" (8.7m) arm	
SK550D.LC	6,610lbs (3,000kg)	5,700lbs (2,600kg)	11,680lbs (5,300kg)
SK400D.LC	6,610lbs (3,000kg)	5,700lbs (2,600kg)	8,820lbs (4,000kg)
SK350D.LC	5,700lbs (2,600kg)	—	8,820lbs (4,000kg)

Kobelco nibblers Option

With ultra long attachment specification, large crusher with mouth width exceeding 3'3" (1m) can be accommodated. Separate boom specification have a large nibbler already installed, for powerful crushing and efficient performance.

KR1100TPR-2

Mouth width **3'7" (1,100mm)**

Weight 5,690lbs (2,580kg) Crushing force (center) 341,710lbf (1,520kN)

KR1350TPR-40

Mouth width **4'5" (1,350mm)**

Weight 8,270lbs (3,750kg) Crushing force (center) 397,910lbf (1,770kN)

KR1500TPR-50

Mouth width **5'0" (1,530mm)**

Weight 11,460lbs (5,200kg) Crushing force (center) 467,600lbf (2,080kN)

20'(6.1m) arm + 11'6"(3.5m) boom insert

Fuel costs can be reduced with outstanding low fuel consumption and mode selection

New environmental engine

A new electronically controlled engine with high power and low fuel consumption is installed. Particulate matter and NOx emissions are suppressed through the engine's high combustion efficiency, exhaust gas after-treatment equipment, and urea SCR system. The engine also conforms to EPA Tier IV Final regulations.

AIS (Auto Idle Stop)

This idling stop function eliminates wasteful fuel consumption while waiting between operations. The engine stops automatically when the operation lever continues to remain in the locked state. Shut down time can be adjusted from 1 min to 5 min.

Fuel consumption mode

3 different work modes are available to prioritize fuel consumption and working power. Modes can be switched while using any front attachment including the nibbler, breaker, or bucket.

- H mode**
When prioritizing work volume
- S mode**
When prioritizing the balance between work volume and fuel consumption
- E mode**
When extensively prioritizing fuel consumption

Bucket / nibbler / breaker mode switch

New cluster gauge

The new multi-function color display is easy to use and in addition to gauges and information such as fuel consumption, maintenance, working radius/boom angle, and rear view camera images, the selected attachment mode and mounted front attachment are also displayed.

Fuel consumption

Attachment mode selection screen

Front attachment selection screen

Enhanced safety functions to assist the operator in production and performance

New cab interference prevention system

The cab interference prevention system is standard on the SK350DLC, SK400DLC, SK550DLC. This feature sounds an alarm and prevents the machine from allowing the working tool to come into contact with the cab during operation. Current tool position can be detected with high accuracy so tool can be safely moved at close range without contacting the cab, resulting in safe working range. Operator is able to program multiple tools into the systems.

System configuration

The system calculates the various boom, attachment and idler link angles to create a proximity to the cab in order to prevent cab interference.

System operation

As the working tool approaches the cab, alarm is sounded before any contact can occur, and the machine automatically prevents tool from making contact with the cab.

Tilt cab

Cab is able to tilt up to 30 degrees and is a standard feature. The operator can maintain a comfortable posture during high elevation demolition work, suffering less fatigue over long working periods.

- Crosspiece on right side cab window for operator safety.
- Lower cab mirror and light to ensure full visibility for work around the machine base.
- Cab tilt lock for greater safety during tilt mechanism maintenance.
- Alarm to prevent accidents when cab tilting is operated.
- Cab lowering device for emergencies.

Stability warning system

The working radius and stability are calculated from the position of the attachment, and the operator is warned with a alarm (continuous sound) where the machine's stability could be compromised.

Swing angle sensor

The working range is largest when working in-line with the track frame or over front of machine. For maximum stability and safety, Kobelco recommends working in-line with the track frame whenever possible.

Demolition structure cab

The adjoining edge of the top and front windows are free of view-obstructing pillars, and radial type grid guards are installed on front and upper sides. This gives the operator an unobstructed and continuous view from ground level to the maximum working height.

- ISO 10262 level II FOPS front and top guards.
- The cab guards can be opened and closed without tools, and the glass can be cleaned easily.
- Vertical open/close roller shades that can be stopped at any position.
- Laminated front window.

SK550DLC
Separate boom specification

Multiple standard features and accessories for ensuring safety

Rear view camera

The rear view camera is displayed on the multi-display.

Right side camera + monitor

Rear and side camera views can be displayed on the separate monitor.

Boom, arm and jib holding valves

Standard - to prevent boom or arm from falling if hose is damaged.

Cab with two LED lights

Cab mounted lights are standard.

Travel alarm

The alarm cautions workers in the area that the machine is traveling.

Swing flasher & Rear work light

The swing warning lamp helps prevent collisions and accidents while the upper body is turning.

Specialized boom/front stands*

For greater safety and efficiency during assembly, disassembly and transport.

Falling object deflector

The guard deflects falling debris away from the machine. This is standard for the ultra long attachment.

* The accessory settings may differ according to the class or specification. Refer to the list of key accessories on the back page for details.

Highly durable structure to show enduring excellent performance in hard operations

Dedicated boom and arm for the ultra long attachment

Factory engineered heavy duty boom and arm. [Ultra long attachment]

- Lifting eyes are provided.
- Hoses are routed for easy maintenance.

Various reinforcements and protective structures are incorporated in the arm section to prevent damage from contact or flying debris.

- Guided reinforced bucket cylinder guard with box-type structure

- Electric wiring with optimized routing and full cover for preventing damage

- Hoses routed to protect from damages

- Guarded work LED lights

Hydraulic oil filter restriction indicator

Clogging is detected by the pressure difference at the filter entrance and exit, and warnings are displayed on the color multi-display. Hydraulic equipment trouble can be prevented by taking action before contaminants enter the hydraulic oil tank.

LED lights

Bright, long-life LED lights fitted to left and right of arm for ultra long attachment specification, and to left and right of boom for separate boom specification.

SK550D_LC
Ultra long attachment specification
20'(6.1m) arm + 11'6"(3.5m) boom insert

Various functions and accessories for the longevity of the machine

Upper frame belly guards
The 0.24"(6mm) thick reinforced cover protects the inner devices & engine unit.

Swivel guard
The lower car body structure is fitted underneath with a 0.35"(9mm) thick reinforced cover.

Dust suppression system (with drainage circuit)
A drainage circuit is installed to drain water from the lines and prevent rust or freezing.

New hydraulic oil filter
Glass filtration material with outstanding filtering ability and durability is used.

Air cleaner (double element)
The double filter system provides clean and filtered air for the engine.

Auto lubrication system
The upper body is automatically greased at specific times to reduce operator maintenance before starting work.

Additional tool box
A large storage box for storing tools is provided.

Reinforced guard for travel motor
Thick steel plate used to ensure strength and protect drive motors.

Maintenance space
Large open space on top of machine to easily service and inspect engine.

Battery shut-off device
Single switch to prevent battery discharge over long inactive periods.

Full track guides*
Crawler de-tracking is prevented even on roughest ground littered with demolition rubble.

Crawler extension/retraction mechanism guard
Hydraulic cylinders are protected from debris. [on SK400DLC and SK550DLC]

* The accessory settings may differ according to the class or specification. Refer to the list of key accessories on the back page for details.

Engine

Notes:
 1. Do not attempt to lift or hold any load that is greater than these lift capacities at their specified lift point radius and height. Weight of all accessories must be deducted from the above lift capacities.
 2. Lift capacities are based on machine standing on level, firm, and uniform ground. User must make allowance for job conditions such as soft or uneven ground out of level conditions, side loads, sudden stopping of loads, hazardous conditions, experience of personnel, etc.
 3. Arm top pin is defined as lift point.
 4. The above lift capacities are in compliance with SAE J1507. They do not exceed 87% of hydraulic lift capacity or 75% of tipping load. Lift capacities marked with an asterisk (*) are limited by hydraulic capacity rather than tipping load.
 5. Operator should be fully acquainted with the Operator's and Maintenance Instructions before operating this machine and rules for safe operation of equipment should be adhered to at all times.
 6. Lift capacities apply to only machines as originally manufactured and normally equipped by KOBELCO CONSTRUCTION MACHINERY CO., LTD.
 7. This table cannot be applied for high reach demolition machines.
 8. Use this machine in the following applications. In specification for ultra long attachment for demolition work. In specification for separate boom for demolition and loading. Never use the machine for any purpose other than the above applications.
 9. Please carefully read the operation's manual.

Dimensions

Dimensions (main body + base boom) (Unit: ft-in (mm))

Assembled machine dimensions (Unit: ft-in (mm))

Disassembled dimensions and weight

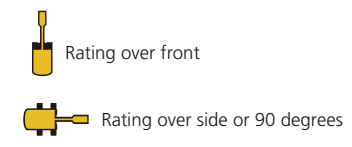

Working range

The measurements do not include crawler shoe lugs. Working ranges with max tool weight installed.

Lifting Capacities with Separate boom

A – Reach from swing centerline to arm tip
 B – Arm bucket pin height above/below ground
 C – Lifting capacities in pounds (kilograms)
